

Types of Wormer / Active Ingredients

At this stage of the war against parasites there is little likelihood of any new anthelmintics in the near future - we work with what is available and use these products strategically.

Chemical groups and their active ingredients: Horse Wormers available for use will have a combination of one, two or three of these four groups of anthelmintics.

Let's get technical and break it down even further

Benzimidazoles

Oxibendazole
Oxfendazole
Fenbendazole
Mebendazole
Tiabendazole

Tetrahydropyrimidines

Pyrantel pamoate
Pyrantel Embonate
Pyrantal Tartrate
Morantal Tartrate

Macrocytic Lactones

Ivermectin
Abamectin
Moxidectin

Prazinoisoquinolines

Praziquantal

Next step - brands - what's inside the tubes?

Age of the horse, a regular Faecal Egg Count testing programme and farming practices are important factors to consider when planning a strategic worming programme for your horse. An example of the programme shown below incorporates a combination of worming ingredients, rotated over a period of one year.

Your potential worming programme could look like this

Jan	Feb	Mar	April	May	June	July	August	Sept	Oct	Nov	Dec
Prazivec Ivermectin & Praziquantal		Morabec Morantal Tartrate Abamectin			Equest Moxidectin Praziquantal		Strategy T Oxfendazole & Pyrantel Embonate				

Get Your Horse's Annual Worming Programme sorted

This programme has been worked through in consultation with our veterinary team and has been used by the Horse Wormers Direct Team

Horse Wormers Direct pricing structure is based on quantities ordered. We distribute direct to farms throughout NZ and Australia. Contact Les or Janine Wallace Call or text on +64 21 488 093 or email wallace@wormersdirect.co.nz

This programme for a mature horse has been created by the Horse Wormers Direct team in consultation with their veterinary advisors.

Prazivec - Ivermectin / Praziquantal

- Broad spectrum wormer for horses of all ages
- A concentrated dose in a small tube
- Thixotropic paste - absorbed the minute it hits the tongue
- Tube size / easy trigger gun-handle
- Will treat a horse up to 600kg

Morabec - Morantel Tartrate / Abamectin

- Broad Spectrum wormer for horses of all ages
- Easy trigger gun-handle
- Thixotropic paste - absorbed the minute it hits the tongue
- Will treat a horse up to 600kg

Strategy T - Pyrantel Embonate / Oxfendazole

Broad spectrum worming paste that is effective in treating all major worms in horses. Doses up to a 700kg horse

Equest Plus Tape - Moxidectin / Praziquantal

Horse Wormers Direct also work closely with Zoetis to supply Equest in recognition of the importance of using Moxidectin early in the winter to deal to the encysted and larval stages of redworm. A tube of Equest will dose a 575kg horse
